

## Assignment 2

Name: Prashansa Nalawade

1) Which field of the Customers table is the primary key?

A MySQL Primary Key is a unique column/field in a table that should not contain duplicate or NULL values and is used to identify each record in the table uniquely.

Customer number(Cnum) is the primary key in the customer table.

2) What is the 4th column of the Customers table?

The Ratings column is the 4th column in the Customers table.

Columns are inserted according to the sequence of creation of the columns.

3) What is another word for row? For column?

Another word for the row is " Record " and for the column is " Fields ".

4) Why isn't it possible to see the first five rows of a table?

SQL tables represent unordered sets.

So, there is no such thing as the first five rows or last row -- unless a column explicitly defines the ordering.
